The Spatial Correlation Function

“The probability of finding two things
[events, people, villages...]
a distance R apart.”

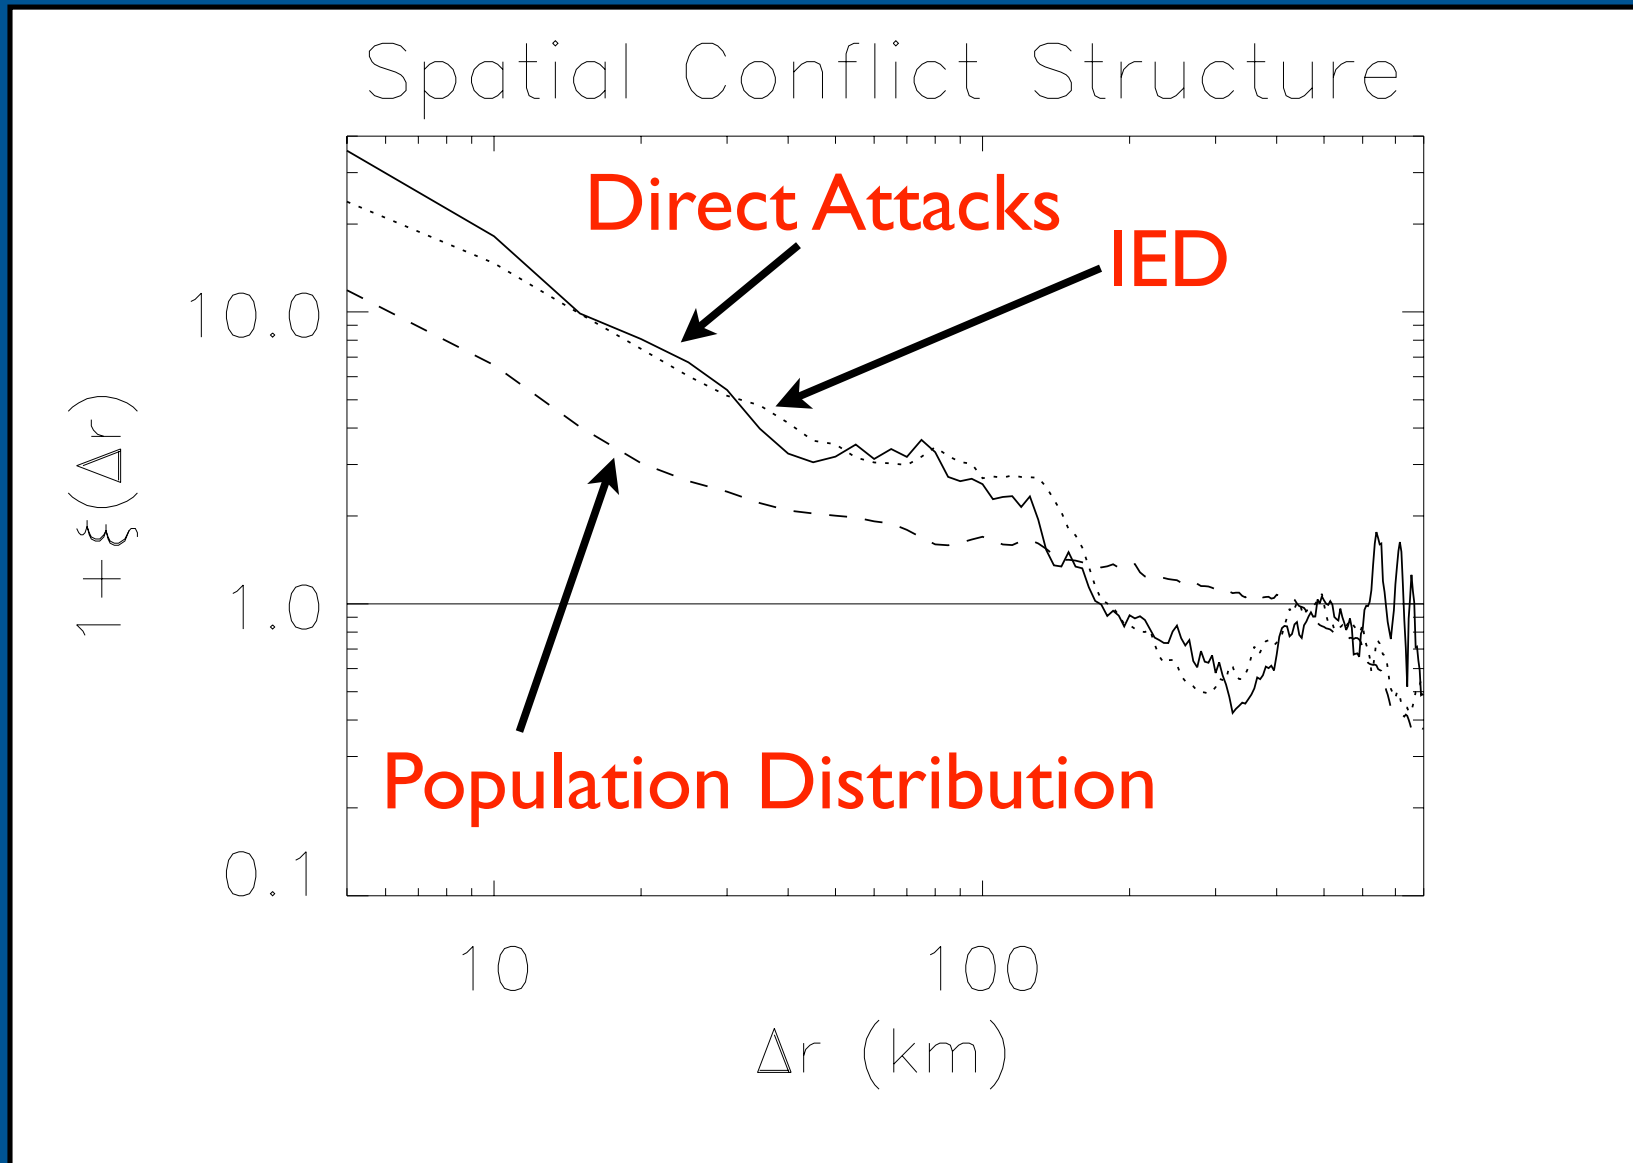

$$P(R) = \bar{n}^2 [1 + \xi(R)]$$

$$P(R) = \bar{n}^2 [1 + \xi(R)]$$

density (squared)
“the higher the density,
the more pairs you can find”

Deviations from random
 $\xi > 0$: clustered
 $\xi < 0$: self-avoiding

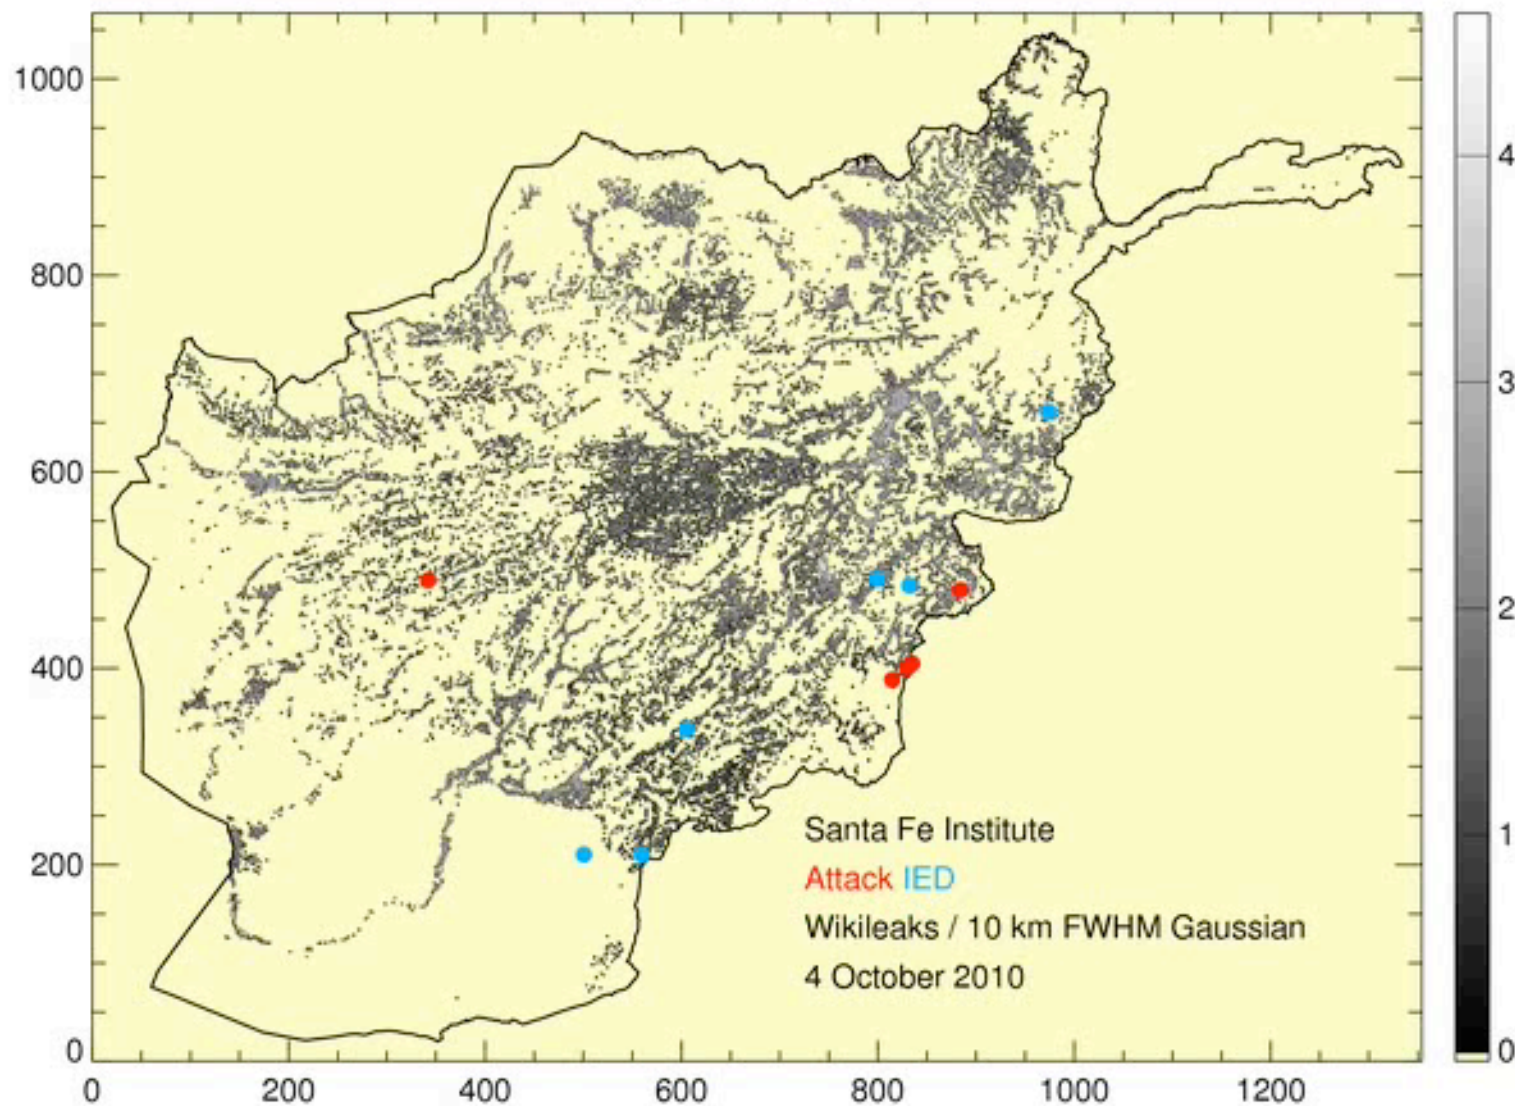

The Spatial Structure of Conflict

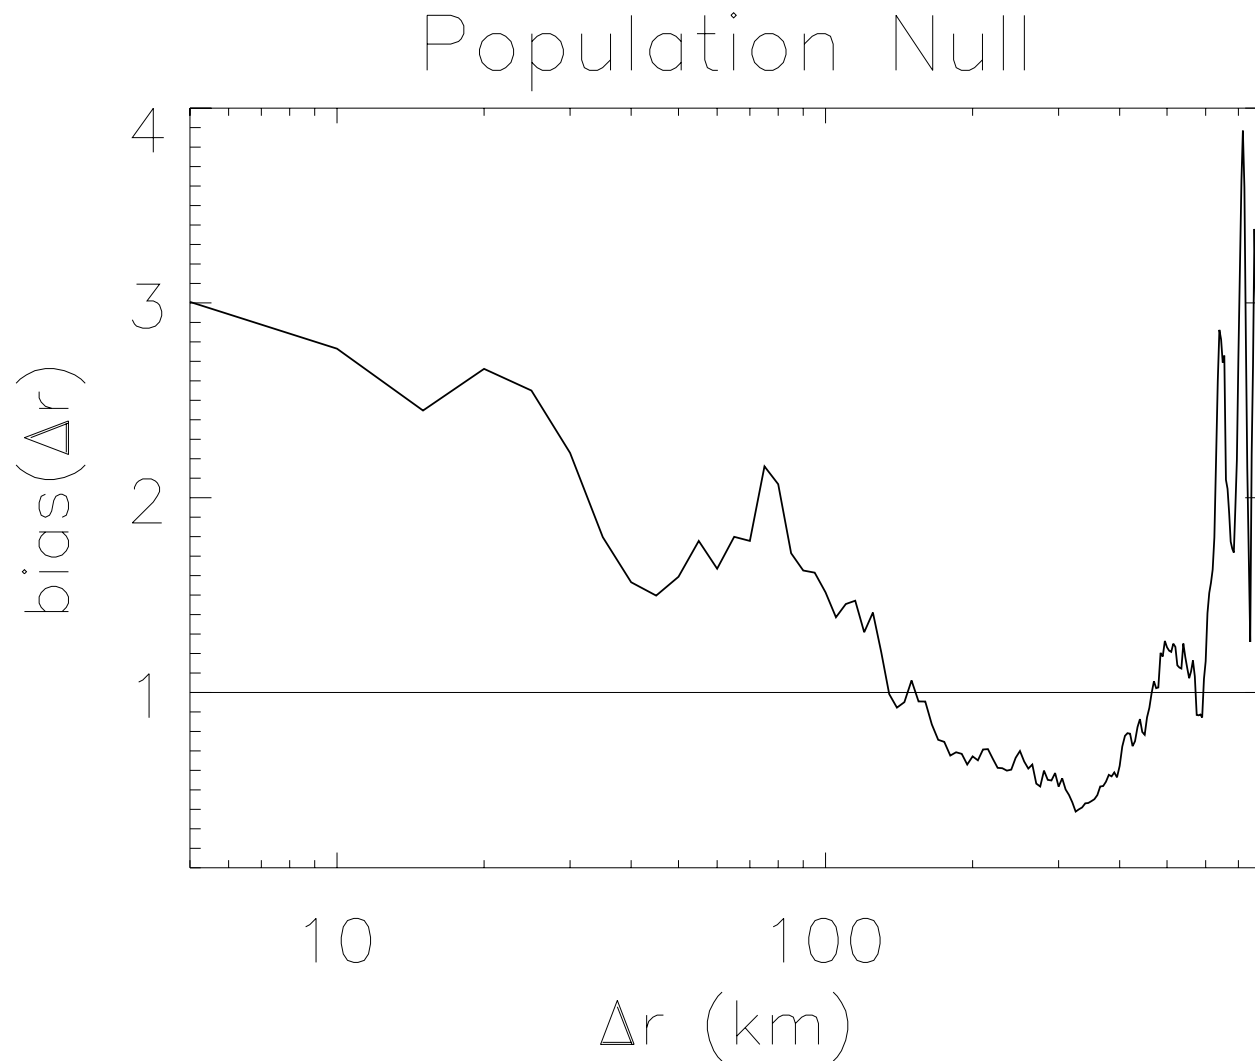

Population and Violence

Clustering “over and above” Population

Clustering “over and above” Population

Spatio-temporal

“How do events cluster in *time* as well as *space*?”

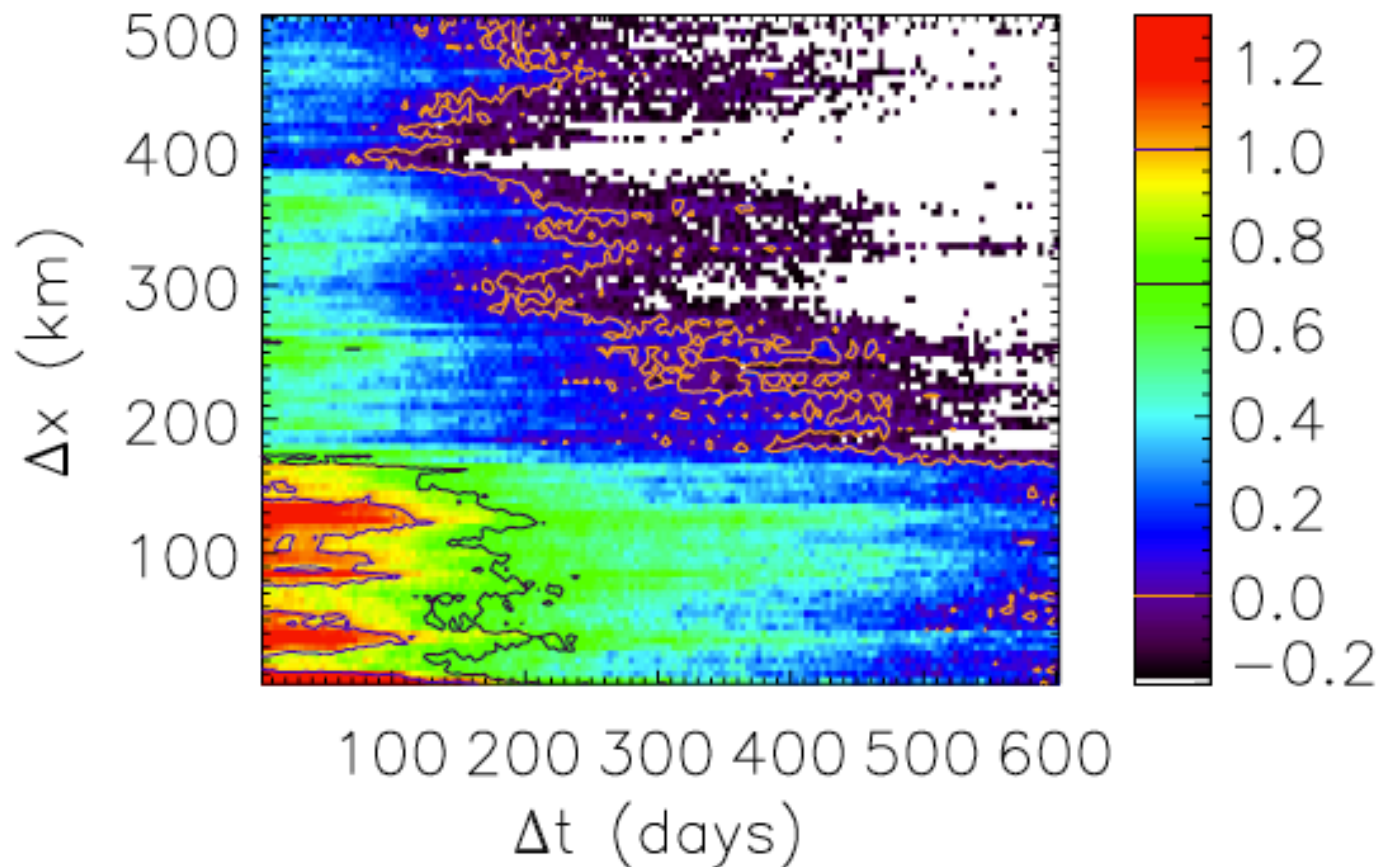

$$P(R) = \bar{n}^2 [1 + \xi(R)]$$

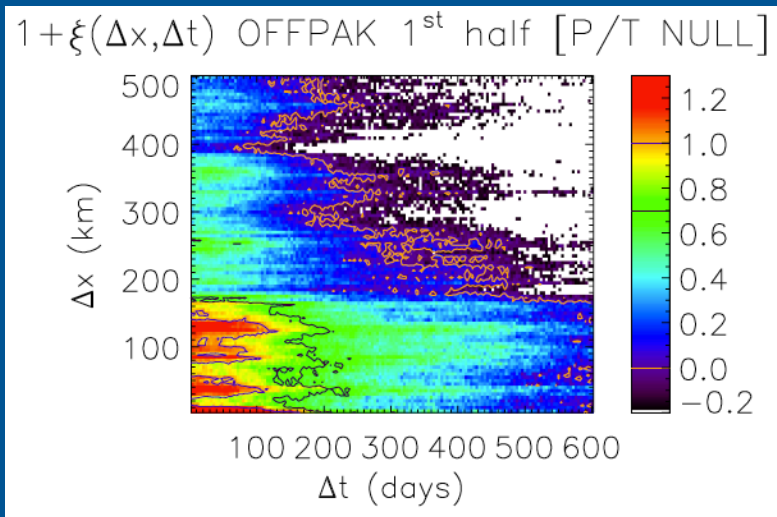

$$P(R, T) = \bar{n}^2 [1 + \xi(R, T)]$$

Space and Time Correlations in Afghanistan [Counter]insurgency

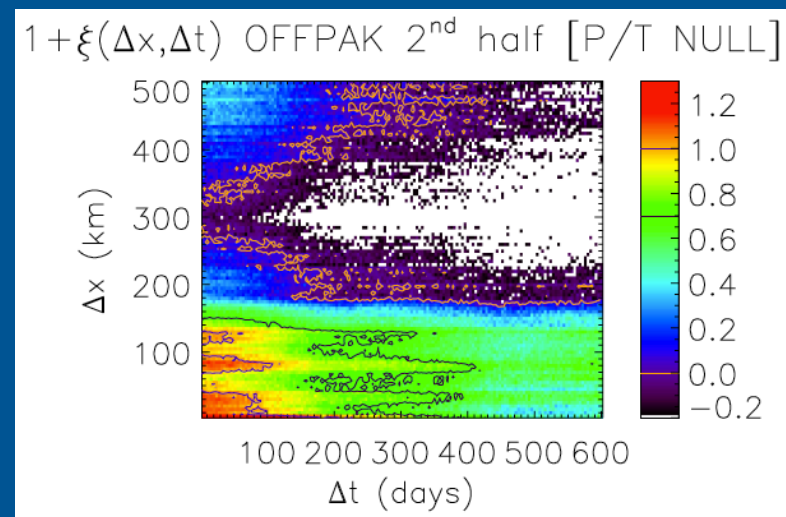

$1 + \xi(\Delta x, \Delta t)$ OFFPAK 1st half [P/T NULL]

Adaptive Insurgencies

Early: geographically dispersed,
short-term correlations

Late: concentrated
and persistent in time

What Analysis Can't Do

1. Predict specific events
2. Predict generalities in new and shifting contexts

What Analysis Can Do

1. Test the narratives that humans use to explain
2. Enrich the vocabulary of those narratives
